Art. 1 - Scope

1. A public selection is announced to award 1 research fellowship lasting 12 months, with the possibility of renewal within the limits of art. 2 of the Regulations on university research fellowship awarding, which will be subject to a specific contract.
The expected starting date is August 2017.

The research fellowship amounts to Euro 21,332.00 per year gross to the recipient, net of the expenses to be sustained by the Provider. The amount may be subject to adjustment in the event of variations in the law.

2. The research fellowship is awarded for the purpose of collaboration with the following research programme of the Department of Molecular sciences and Nanosystems:

- **Title**: "Dynamical Simulations of collision process between glass vials"
- **Scientific disciplinary sector**: FIS/03
- **Scientific coordinator and tutor**: prof. Achille Giacometti
- **duration**: 12 months
- **abstract**

Molecular Dynamics is a very popular methodology, originally devised to investigate microscopic systems, such as atoms and molecules, subject to defined forces. If the forces were the actual forces, the dynamics, as well as equilibrium properties, would be exact. This methodology has been later extended to mesoscopic systems, such as granular systems, by the inclusion of dissipative forces.

Within the latter framework, a frequent feature, commonly referred to as jamming or clogging, hinges upon the flux in the presence of geometrical constrains. A rather similar feature occurs in glass vials flowing inside the production line of interest of NUOVA OMPI, and causing microfractures damaging the content of the vials. In this project, we plan to address this project within a novel approach, patterned after a similar approach used in granular systems.

**OBJECTIVES**
Implement a molecular dynamics simulation for this system within a more general self-consistent scheme

**EXPECTED RESULTS**
Find the most suitable conditions to minimize the occurrence of microfractures in the production line of glass vials, using numerical simulations.

3. The selection aims to ascertain the scientific-professional requirements deemed necessary to carry out the above research activities.
