Objective:
This course is an introduction to the subject of intellectual property, with particular emphasis on regulations in effect at Ca’ Foscari University. The course focuses primarily on patents and provides a brief outlook at trademarks and other means to protect research results. It also presents a comparisons of what can and cannot be protected, and what rights the owner does and does not have, along with the obligations that come with the title. Issues relating to information technology and business methods are also highlighted.

The presentation material will be made available to the students after the course.

**Part 1: Course Program**

1. Tools to protect your results
2. Intellectual property @ Ca’ Foscari: players and methods to give value to your results
3. What you really need to know for your research and before publishing: a case study
