# From "genealogy" to "dynamogram"

The image, the images, would be a graphic way of making time and its work visible. The concept of dynamogram is a concept drawn from physics and mechanics. It involves the ideas of force and time and. therefore, of movement. Warburg used this word to conceptualize his idea of the image-symptom, its movements and its temporalities. In this work, we will use it to account for an ensemble of reworked images which together form the inscription of forces, of interwoven times or, as Didi-Huberman notes, a form of the forms of time. But in this case, revisited by the eyes of those who formed this project (Lia Colombino).

#### DESTIEMPO: Dinamograma de Puerto Casado
