VALUING ANCIENT WATER CULTURES

An inspiring source of innovations for sustainable groundwater management

Eriberto Eulisse
Director- Global Network of Water Museums

QUESTION 1

Can historical groundwater management structures, systems and practices contribute to inspire policy makers and institutions to address future resilience planning and better adaptation in order to face the challenges of climate change and growing water scarcity?

QUESTION 2

What is the role and the contribution of water museums ‘to make the invisible visible’ and build new projects and programs on water awareness education for more forward-looking water uses targeted by the UN SDGs?
