Preface

The second part of this issues is devoted to the international conference *MAF 2016 – Mathematical and Statistical Methods for Actuarial Sciences and Finance*, held in Paris (France) from March 30 to April 1, 2016.

The conference has been the seventh international edition of a biennial series begun at 2004, which was born by the belief of the colleagues of the Department of Economics and Statistical Sciences of the University of Salerno (Italy): the idea following which the cooperation between mathematicians and statisticians in working in actuarial sciences, in insurance and in finance can improve research on these topics.

This second part collects a pair of original papers freely submitted to the journal by Contributors of the conference and, following the usual praxis, each peer reviewed by at least two anonymous referees.

Editor-in-Chief (and member of the Steering Committee of the conference):

Marco Corazza
