Italian version: www.unive.it/cdl/et4

The Bachelor's degree programme in Economics and Business aims to provide students with:

- the necessary knowledge to understand and critically analyse economic phenomena at various levels (macroeconomic, market, enterprise);
- useful competencies to deal with the economic problems faced by private companies and public bodies;
- the knowledge required to successfully continue their studies, enrolling in a Master's degree or Professional Master's programme.

This Bachelor's degree programme provides students with a flexible and multi-purpose education, based on a grounding in economic, mathematical-statistical, business and legal issues, in order to have a general overview of economic phenomena.

Three different curricula are activated, two of which aim to analyse the different economic institutions. The third curriculum is focused on the tourist sector.

Internships and a final exam complete the course.
The COUNSELin(G)ternational office provides to international students enrolled in Degree programmes a counseling service where they can share their opinions, their university experiences and ask their questions.

The Counselors support international students with informative and academic orientation, facilitate cooperation between professors and university offices, and aim to create an international multicultural community.
Still need help?
