| Acronym | PROSPECT | | |
| Length | 27 months | | |
| Start | September 7 th , 2020 | End | December 6 th , 2022 |
| Funding | Italian Ministry of the Environment | | |
| Principal Investigator | Mario Volpe | | |
| Scientific Area | | | |
| Abstract | <p>The aim of Veneto PROSPECT is to build a shared framework of knowledge and skills to support the process of integrating sectoral policies towards complementary perspectives of sustainability, with the ultimate aim of strengthening the process of implementing the regional strategy for sustainable development (SRSvS). To support the implementation of the SRSvS, PROSPECT uses open innovation to construct in a shared way an adequate interpretative model of sustainability and a system of indicators for mapping sustainability in the entire scope of regional policies. The project creates a pro-active dialogue between scientific knowledge and planning practice on the theme of sustainability, through work tables and laboratories shared between the University, the Region and the stakeholders.</p> | | |
