

SELECT

Progetto	Unfolding the SEcrets of LongEvity: Current Trends and future prospects.		
Acronimo	SELECT		
Durata	48 mesi		
Avvio	19/08/2019	Termine	19/08/2023
Finanziamento	Tempus Programme		
Responsabile scientifico	Stefano Campostrini		
Area scientifica	AGRONOMY AND FIELD CROPS [AGR/02]; APPLIED ECONOMICS [SECS-P/06]		
Abstract	<p>The rapid social, economic, and technological transformations characterizing our society in the recent years are producing several effects on many complex and dynamic processes of human health. The project will focus, in particular, on the recent upward trend in longevity, and on its relation with current and future morbidity and disability patterns. The joint analysis of such processes, which plays a key role in many public health systems, requires novel qualitative and quantitative paradigms. In fact, unfolding the secrets of longevity, learning the dynamic interrelations between morbidity, disability and mortality, identifying future trends, and devising effective interventions can only proceed under a collective effort by Demographers, Epidemiologists, Social and Data Scientists.</p> <p>The mission of SELECT is to explore the factors and mechanisms of longevity evolution in the recent years and link them with morbidity trends to foster healthy longevity. It will address this goal through a multidisciplinary team of Demographers, Epidemiologists, Social and Data Scientists, who will take advantage from the availability of several datasets to merge public health and epidemiological theories with a data-driven approach based on innovative models.</p>
