

SHARE COHESION

Progetto	Survey of Health, Ageing and Retirement in Europe		
Acronimo	SHARE		
Durata	48 mesi		
Avvio	01/10/2019	Termine	30/09/2023
Finanziamento	Horizon 2020		
Responsabile scientifico	Agar Brugiavini		
Area scientifica			
Abstract	<p>SHARE is a research infrastructure designed to better understand and address the challenges and opportunities of population ageing. Its main objective is to provide excellent data for ageing research through a combination of (a) transdisciplinarity, (b) longitudinal design, and (c) European coverage with rigorous cross-national comparability ensured through ex-ante harmonisation.</p> <p>This threefold concept has become a major success, as demonstrated by the number of scientific publications and its support for evidence-based policymaking at both EU and national levels. The data are of world-class value, as confirmed by recent evaluations and by the large number of users, including many outside the EU.</p> <p>The main objective of this project is to strengthen SHARE's centralised approach in order to combine excellence with cohesion throughout the process of innovating scientific content and survey methods. In particular, the project will support supranational innovation and development activities to be carried out by the area coordinators (scientific content) and the international coordinator (survey methods) during waves 8–10 of SHARE, thereby advancing SHARE's scientific state of the art and enhancing transnational cohesion across all 28 SHARE member countries.</p>
