

MIMOSA

Interreg 2014-2020

Project	MIMOSA, Maritime and multimodal sustainable passenger transport solution and services
Acronym	MIMOSA
Website	https://programming14-20.italy-croatia.eu/web/mimosa
Duration	36 months - from 01/01/2020 to 30/06/2023
Scientific Coordinator	Andrea Stocchetti
Research team	Andrea Stocchetti, Serena Favaro, Raffaele Pesenti, Pietro Lanzini, Giovanni Fasano
VSM role	Project partner and Work Package Leader WP 3
Budget (total)	€7.140.000,00
Budget assigned to Ca' Foscari	€ 493.300,00
Abstract	<p>The Venice School of Management is a scientific partner and Work Package Leader of the European project MIMOSA - "MARITIME AND MULTIMODAL SUSTAINABLE PASSENGER TRANSPORT SOLUTIONS AND SERVICES" funded by Interreg V-A Italy-Croatia CBC Program 2014-2020. The main objective of the project is to improve the multimodal offer of passenger transport services in the entire Program area: an area of more than 85,500 square kilometers and a population of more than 12.4 million inhabitants the eligible area of the Italy-Croatia Program stretches along both sides of the Adriatic Sea.</p> <p>The project approach starts from an in-depth analysis of the current transport situation (maritime and coastal areas) at the cross-border level taking into special consideration regional connections in order to make passenger mobility in the entire program area more accessible, sustainable and low-carbon. The connections between Croatia and Italy show bottlenecks and lack of infrastructure that can facilitate intermodal connections from one</p>

country to another and within the countries themselves to the hinterland. At the same time, the need to favor multimodal solutions with low environmental impact (especially in terms of GHG) and high efficiency (integrated connection nodes between road, sea rail and air transport) should be added. Indeed, the predominance in this context of road transport causes important negative environmental and socio-economic consequences.
