**PRIN-PNRR 2015**

<b>Project</b>	Smart PORt Terminals
<b>Acronym</b>	SPORT
<b>Call</b>	2015
<b>Duration</b>	3 years - from 05/02/2017 to 05/02/2020
<b>Scientific Coordinator</b>	Walter Ukovich (national), Raffaele Pesenti (local)
<b>Research team</b>	Giovanni Vaia, Giovanni Fasano, Dario Bauso, Giacomo di Tollo
<b>Budget (total)</b>	€ 29.428 (local) € 146.000 (national)
<b>Budget assigned to Ca' Foscari</b>	€ 8.571
<b>Project number</b>	2015XAPRKF_007
<b>Abstract</b>	<p>The objective of the project is to define innovative methodologies in order to implement a software platform capable of providing support to port logistics operators in the management of intermodal activities.</p> <p>In order to achieve this, the SPORT approach envisages that the platform is organised on two levels: a basic level that manages the integrated transversal functions such as communication and user interfaces, databases and tools for modelling, optimisation and simulation, and an application level, with a series of integrated modules, each of which relates to a specific problem relevant to the management of the activities of interest.</p>
