## A few practical points

~ Presenters are kindly asked to **upload their presentations on the laptop in the room where they are presenting**. Please do not use your own laptop for the presentation.

~ We have a **very tight schedule** thus it is crucial that sessions do not overrun. The allocated time for each paper is 30 minutes (25 minutes for the presentation and 5 minutes for questions). Please keep the assigned presentation order to allow for switching between sessions.

~ We kindly ask the last speaker in a session to **act as chairperson**, monitoring time on behalf of the speakers.

# Keynote Lectures

## Thursday, June 11th, 2026 – Ca' Foscari University of Venice Lecture
**12.00-13.15, Room 4A**

Speaker: **Marciano Siniscalchi,** Northwestern University

*Structural Forward Induction* (joint with Emiliano Catonini)

Abstract:

Structural rationality (Siniscalchi, ECMA 2022) requires players to account for the possibility of future surprises when choosing their current actions. This requirement strengthens the notion of (weak) sequential rationality introduced by Reny (ECMA, 1992). We investigate the implications of structural rationality for both equilibrium and non-equilibrium solution concepts. In particular, we explore the interplay between forward-induction reasoning and structural rationality, provide computationally tractable characterizations of structural rationality under strong belief restrictions (Battigalli and Siniscalchi, JET 2002), and draw a connection with quasi-perfection (Van Damme, IJGT 1984).

## Friday, June 12th, 2026 – Debreu Lecture
